- Emergency medical fund

COVID-19 Relief Initiatives

Tibetans in India and Nepal have reported alarming increase in new infections and fatalities during the new surge of COVID-19 in the past two months. Total known cases in Tibetan communities in India has increased to 4864 with 126 deaths. In the midst of this worst surge, The Tibet Fund is continuing its efforts to help severely affected communities.

Your support and generosity have made a significant difference in protecting Tibetan refugees in India and Nepal from the pandemic. We have made grants worth $234,000 to 38 hospitals and healthcare centers to procure essential medical devices for treatment and essential medical supplies to prevent infection. In addition, we approved a budget of $531,000 for livelihood programs to avoid malnutrition risks among newborn children and infants caused by food insecurity, and prevent the most vulnerable women from falling into poverty, due to their inability to earn income during the pandemic.
